# SpamExperts Incoming Email Filter

A powerful solution to safeguard networks from inbound spam and malware, helping web hosts save time and money.

Inbound spam, ransomware, and phishing attempts can put any internet service provider at risk. N-able™ SpamExperts helps web hosts and ISPs/telcos strengthen email protection. Services include affordable inbound filtering driven by a continuously updated Intelligent Protection & Filtering Engine to meet emerging threats. The solution can be deployed in a redundant cloud environment or on premises.

How it works:

N-able SpamExperts incoming spam filter is an email gateway solution. Activation is done with a simple DNS adjustment. Once the MX records are changed, all inbound email goes to our system first, where it is filtered and then relayed to the unchanged destination mail servers of your clients.

It provides first-level defense running in front of your mail infrastructure and separates legitimate from unsolicited email with the help of advanced filtering algorithms and spam pattern detection methods. It offers full inbox protection with a nearly 100% accuracy rate. Potentially harmful messages are queued in quarantine and can be managed by end users.

## Helps save resources and money

- Protects networks against the latest email-based threats.

- Saves network resources with an efficient first-level incoming filter defense.

- Helps save money with competitive and affordable licenses.

## Offers dual deployment options and integrates with a broad range of tools

- Cloud or on-premises deployment.

- Free add-ons to integrate with the most popular control panels and other email collaboration tools.

- Multiple branding options available.

## Gives customers and users visibility and control over their email flows

- Empowers users to manage their email flows and gain real-time visibility into threats.

- Designed to help ensure email continuity.

- Deploys regular new releases based on customer input.

Features at a glance

Email filtering

- Advanced antispam and antivirus scanning technology.

- Free-of-charge domain and mailbox aliasing (including mailbox and alias LDAP sync).

- Extension blocking and email size restriction management.

- SPF/DKIM/DMARC checks and sender/recipient deny and allow lists.

Quarantine

- Web-based and IMAP-based quarantine with view, release, or remove messages options, plus the ability to add to deny and allow lists.

- Optional message quarantine with automatic expiry, with the ability to view or release.

- Manage quarantine via the iOS® or Android® app.

- Customizable reporting.

Web interface

- Multilingual and brandable interface with multilevel access (super admin, admin, reseller, domain, and email-address level).

- Authentication against remote LDAP server (email user level).

- OAuth2 / OpenID Connect authentication (admin level), plus optional two-factor authentication.

- HTTPS, including forcing, free certificate generation and management.

Email Continuity

- Multilevel control and additional email continuity via storing emails and retrying delivery during outages or downtime.

- Manage queued messages.

- Compose new and reply to emails even if the primary email server is down.

Integrations

- Free add-ons to integrate with the most popular control panels and other email collaboration tools: cPanel/WHM, Plesk®, Odin® APS 1.2/2.0, DirectAdmin, ISPSystem, SmarterMail™, WHMCS, OpenXchange™, Zimbra®.

- Prebuilt third-party add-ons: MachPanel®, Hosting Controller, Host Bill, H-Sphere, iPortalis.

- Custom integrations via an extensive and well-documented API.
